## Severe Series Refueling Tanks

Aluminum Tank Industries Severe Series refueling tanks were designed for severe conditions. These refueling tanks can easily handle larger pumps and off road conditions. Your vehicle takes a beating in off road environments and so does the equipment your transporting, that's why we have developed the Severe Series. The tanks are constructed using 50% thicker HD aluminum and have a unique internal pump bung support. The tank offers these features:

- Lockable SpinSecure vent/prevent cap, highest grade cap in the industry. The prevent lets the tank take in air while pumping.
- Fully welded baffles for additional strength and reduce content movement. Internal baffles create smaller compartments inside the tank.
- Unique internal pump bung support. Both bungs are equipped with the supports so you can mount your pump on either bung.
- 50% thicker, heavier .190" HD aluminum construction.
- Vent with rollover protection for SAFETY and functionality.
- Two 2" bungs with support for mounting the pump on either side
- \*5 year warranty.
- Special Permit for use in commerce.
- Designed for gasoline, diesel, kerosene, Av fuel, and methanol.
- DOT permit allows transportation while the pump is still attached to the tank.
